DIRECTFLO® PUMPS

Air operated double diaphragm pumps for dosing, spraying, transferring, evacuating and distributing a wide variety of fluids.

REVOLUTIONARY DIRECTFLO® TECHNOLOGY

Directflo® pumps are based in an "inside-out" technology: the fluid is pumped through the centre of the pump and the compressed air acts on outside face of the diaphragms.

- EXTREMELY FAST CHANGE OVER
- DIAPHRAGMS DO NOT FULLY FLEX WHICH GREATLY EXTENDS LIFE

DIAPHRAGM PUMP OPTIONS

EXTERNALLY DRIVEN PUMP

EXTERNALLY DRIVEN PUMP

DF pumps without the air valve module and end of stroke sensors to be controlled with an external device like a PLC for their use in dosing applications.

INDUCTIVE SENSORS

Used with externally self-driven pumps, the sensor sends a signal to a PLC to reverse the air direction. Sensors assure that the diaphragms complete their stroke and they allow to regulate the pump speed. The sensors are available with NPN, PNP or ATEX (NAMUR) connectors.

END OF STROKE SENSOR

It allows counting the number of cycles of a pump.

REMOTE AIR EXHAUST

Threaded connection replaces the standard bronze sintered muffler for connecting a hose for remote air exhaust. 3/8" connection for DF30, DF50, DF100, DC20, DC30 and DC50 pumps; 3/4" for DP200 pumps and 1" for DF250 pumps.

REDUCED NOISE MUFFLER

Replaces the standard brass disc muffler to further reduce the noise produced by compressed air expansion.

UV INK

Special conductive PTFE sleeve that allows the pump to be used with UV inks.

DC20 PLASTIC PUMPS

Air operated double diaphragm pumps for dosing and transferring a wide variety of fluids.

For OEM applications and industrial processes with lower flow rates. Unbalanced spool valve air motor requires lower start-up pressure for finer flow adjustment using regulating air pressure.

Air operated double diaphragm pumps for dosing, spraying, transferring and distributing a wide variety of fluids in small flow rates applications.

Pump wetted parts are compatible even with the most aggressive fluids and are suitable for use in corrosive environments. Air motor (directional air valve and air chamber covers) is made of polypropylene.

DF30T are dual inlet pumps for 1:1 ratio mixing of fluids with similar viscosity. Both, the initial fluids and the resulting mixture, must be compatible with the pump's wetted materials.

Fully groundable ATEX certified pumps are available for use in potentially explosive atmospheres (Ex II2 GD IIB/IIC 95 °C).

Orientable air inlet, increased installation flexibility.
